# Practice: Intrinsic Layout Lab

## Layout Systems note:

For the assignment I used CSS Grid with repeat, auto-fit and minmax to create a responsive layout that will adapt to different screen sizes. Used clamp for flexible spacing and sizing/padding and the 40rem breakpoint to ensure the content is readable on smaller screens. Then added a container query to change the feature card layout depending on the width of the card.

## AI Disclosure

I used AI to help me understand and guide my CSS implementation and explain responsive layout techniques. I reviewed and applied some suggested code to my stylesheet.
